Contact Tracing at  
your Workplace**

# The Kwema Smart Badge for COVID-19 Contact Tracing at your Workplace

---

Your employees must know that they enter and leave higher traffic environments in their workplace (places where there are more than 10 people at any given time). With **Kwema's patent pending Smart Badge** your employees follow a checkpoint system to check in and check out of areas like the cafeterias, conference rooms, major hallways and entrances.

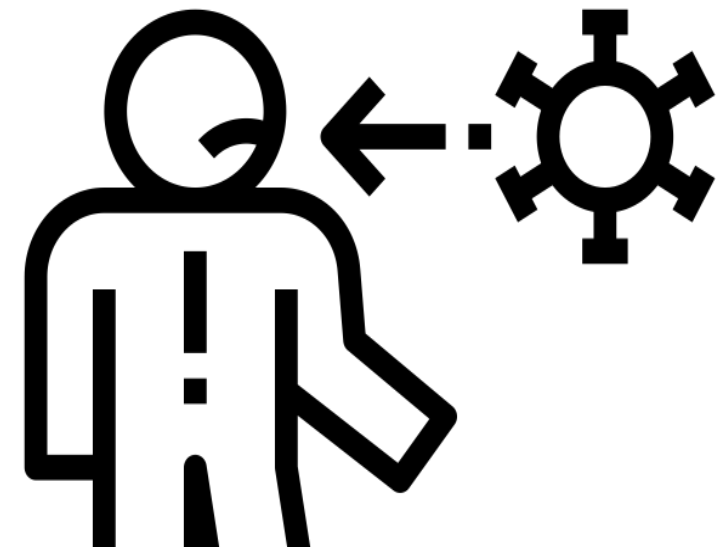

- When somebody is diagnosed positive for COVID-19 a monitoring is made of those who were close to the infected person, at what time, where and subject them to a 3 group contingency plan.

## Whats Registered?

- Employee's Personal Information
- Employee's Contact Map

-  Quarantine
-  COVID-19 Survey
-  Low risk probability

# How it works?

1. Employees must press the button on their devices when they enter or exit certain areas.

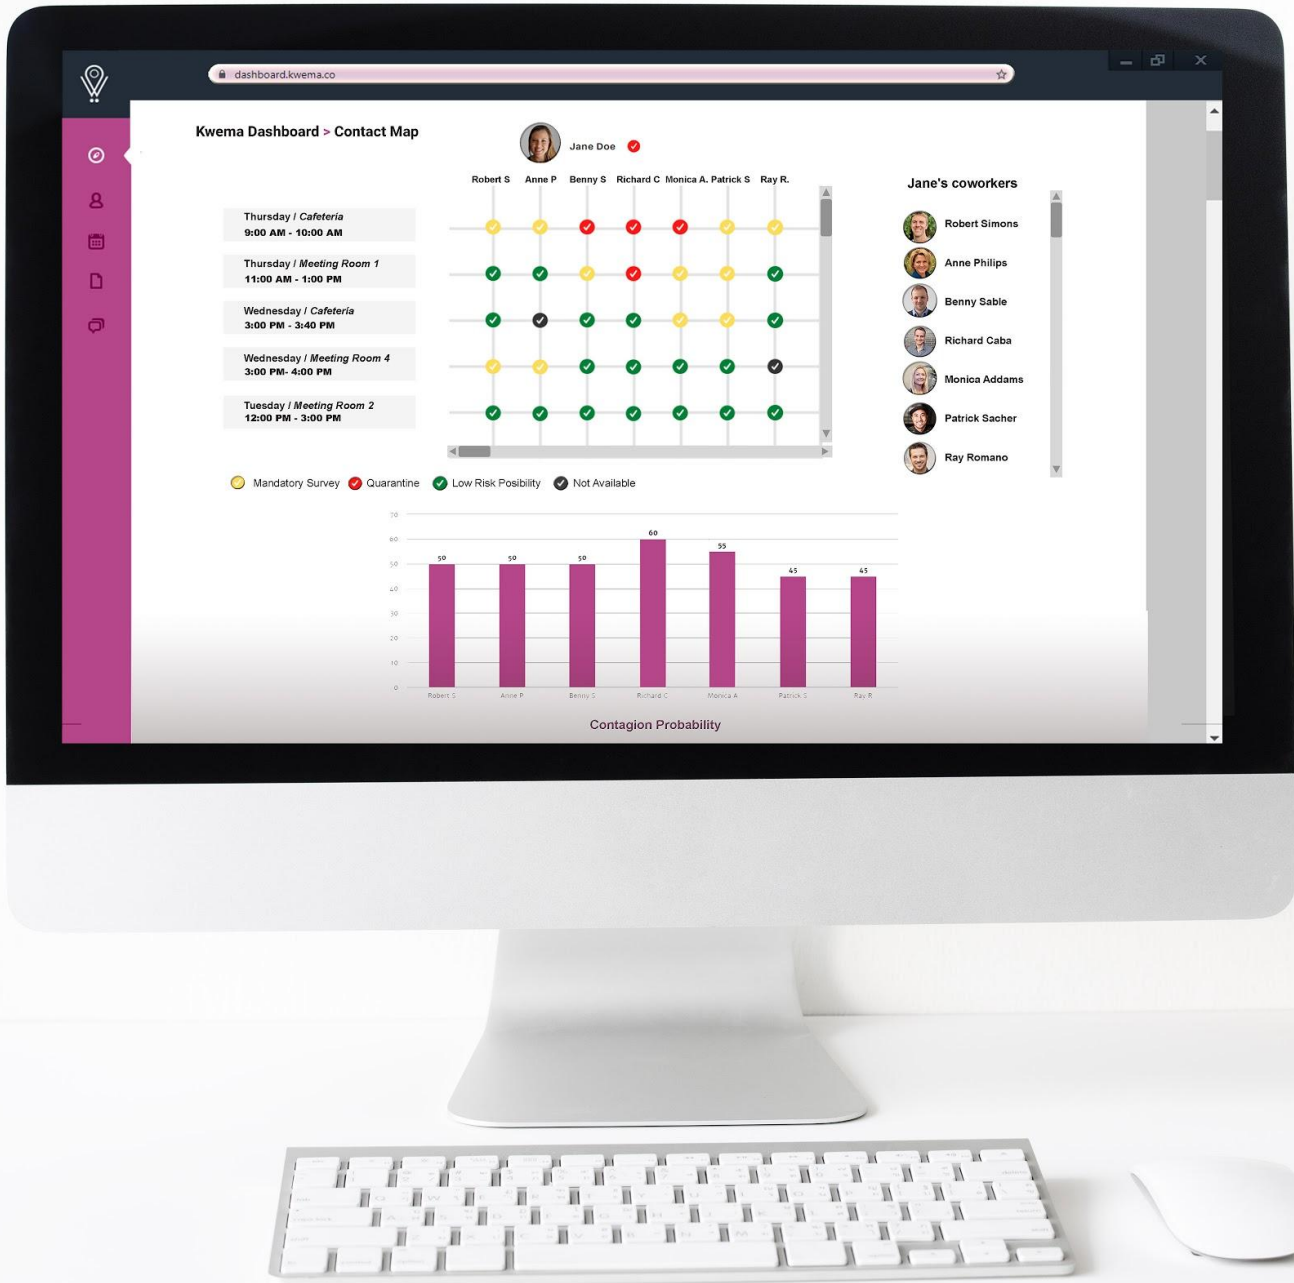

2. **Kwema's** Smart Badge connects to Bluetooth Checkpoint beacons located in the building and registers a timestamp at the location.

3. In the event an employee is diagnosed with Covid-19, you can:

- Trace **WHERE** the employee was
- Identify **WHO** they may have come into contact with
- Classify all employees into **3 RISK GROUPS** and take action to prevent spread
